# 1. Introduction

RazakEvent is a comprehensive event management mobile application developed for Universiti Teknologi Malaysia (UTM) students and staff. The app streamlines the process of discovering, participating in, and managing campus events. It leverages modern mobile development technologies including Flutter and Firebase to deliver a fast, reliable, and user-friendly experience for the entire UTM community.

This manual serves as a complete guide for student users of RazakEvent. It covers every feature available to students, from creating an account and logging in, to browsing events, scanning QR codes for attendance tracking, and viewing your personal profile with merit points and leaderboard rankings. Whether you are a first-time user or someone looking to make the most of the app, this document will walk you through each feature step by step.

The application follows a clean, intuitive design with a dark-themed interface that is easy on the eyes. Navigation is handled through a bottom navigation bar with three main sections: Home, Scan, and Profile. Each section is designed to serve a specific purpose in your event management journey, making it simple to find what you need without unnecessary complexity.

# 2. Getting Started

## 2.1 System Requirements

Before using RazakEvent, ensure your device meets the following minimum requirements. The application is built for Android devices and requires a stable internet connection to communicate with Firebase backend services for authentication, event data, and attendance tracking. Without an internet connection, the app will not be able to load events or process QR code scans.

| Requirement         | Specification                       |
|---------------------|-------------------------------------|
| Operating System    | Android 6.0 (Marshmallow) or higher |
| Internet Connection | Required (Wi-Fi or mobile data)     |
| Account             | Valid UTM email address             |
| Storage             | Approximately 50 MB of free space   |
| Camera              | Required for QR code scanning       |

Table 1: System Requirements

## 2.2 Login

To access RazakEvent, you must log in using your UTM email address and password. The login screen is the first screen you will see when you open the application. It features a clean, modern design with a dark background and a centered login form that makes it easy to enter your credentials quickly and securely.

Follow these steps to log into the application:

1. Open the RazakEvent app on your Android device.
2. Enter your UTM email address in the "UTM Email" field. This must be a valid email address ending with @utm.my or @student.utm.my.
3. Enter your password in the "Password" field. You can tap the eye icon next to the password field to toggle password visibility, which helps verify you typed the correct password.
4. Tap the blue "Login" button to sign in.
5. If your credentials are correct, you will be taken to the Home screen. If not, you will see an error message prompting you to try again.

Figure 1: RazakEvent Login Screen

## 2.3 Sign Up

If you do not yet have an account, you can create one directly from the login screen. RazakEvent requires a valid UTM email address for registration, which ensures that only authorized UTM students and staff can access the platform. The sign-up process is straightforward and typically takes less than a minute to complete.

To create a new account:

1. On the Login screen, tap the "Sign up here!" link below the Login button.
2. You will be redirected to the Registration screen.
3. Fill in your UTM email address, a secure password, and your full name.
4. Select your faculty from the available options.
5. Tap "Register" to create your account.
6. After successful registration, you will be redirected back to the Login screen where you can sign in with your new credentials.

## **3. Home Screen**

The Home screen is the main hub of RazakEvent where you can discover and explore events happening around campus. It is the default screen that appears after you log in, and it provides a comprehensive overview of all available events organized by time. The screen is divided into clear sections that help you quickly find events that are relevant to you, whether they are happening this week or scheduled for the future.

### **3.1 What's Happening This Week**

The top section of the Home screen displays events that are scheduled for the current week. This section is particularly useful for staying up to date with immediate events that you may want to attend. Events in this section are displayed as cards that show the event name, date, time, category, and a brief description. You can scroll through the list to see all events happening this week, and tapping on any event card will open the event details page where you can find more information including the venue, organizer details, and participant count.

### **3.2 Coming Soon**

Below the weekly events section, you will find the "Coming Soon" section which displays events that are scheduled for future dates. This section allows you to plan ahead and mark events you are interested in attending. Similar to the weekly section, each event is shown as a card with key details. The "Coming Soon" section helps you discover events further in the future so you can manage your schedule effectively and avoid missing important campus activities, workshops,

seminars, and social gatherings.

### 3.3 Event Filters

At the top-right corner of the Home screen, you will find a filter dropdown button labeled "All" by default. This filter allows you to narrow down the events displayed based on their category. By tapping the filter button, you can select a specific category such as Academic, Sports, Cultural, Technology, or any other category defined by the event organizers. This feature is especially helpful when the events list is long and you want to focus on events that match your interests. The filter applies to both the "This Week" and "Coming Soon" sections simultaneously, giving you a consistent filtered view across all time ranges.

### 3.4 Logout

The Logout button is located in the top-right corner of the Home screen header, next to the "RazakEvent" title. Tapping this button will sign you out of your account and return you to the Login screen. You should always log out when using a shared device or when you are finished using the app to ensure your account remains secure. After logging out, you will need to enter your credentials again to access the app.

Figure 2: RazakEvent Home Screen

## 4. QR Code Scanning (Attendance)

The Scan feature is one of the core functionalities of RazakEvent, designed to simplify attendance tracking at campus events. Instead of manually signing attendance sheets, event organizers generate unique QR codes for their events, and students simply scan these codes using their phone camera to record their attendance. This digital approach eliminates errors from manual tracking and provides real-time attendance data to organizers.

### 4.1 Accessing the Scanner

To access the QR code scanner, tap the "Scan" tab in the bottom navigation bar. This will open the Attendance Scanner screen which activates your device camera automatically. The screen displays a scanning frame in the center with the instruction "Place the QR code within the scan area." The scanner is designed to be fast and responsive, typically recognizing and processing a QR code within one to two seconds of it being positioned correctly within the frame.

### 4.2 Scanning a QR Code

Follow these steps to scan a QR code for attendance:

1. Navigate to the Scan tab using the bottom navigation bar.
2. Hold your device steady and position the event QR code within the white scanning frame displayed on screen.
3. Ensure adequate lighting so the camera can clearly read the QR code.
4. Hold the device approximately 15-30 cm away from the QR code for best results.
5. Once the QR code is recognized, the app will process the scan and display a confirmation dialog showing the event name, date, and attendance status.
6. If the scan is successful, your attendance for that event will be recorded automatically in the system.

**Note:** Each QR code is unique to a specific event. You cannot use the same QR code to mark attendance for different events. Additionally, duplicate scans for the same event are typically prevented by the system to avoid double-counting attendance.

Figure 3: QR Code Attendance Scanner

## 5. Profile and Leaderboard

The Profile screen provides a personalized overview of your activity within the RazakEvent ecosystem. It displays your user information, event participation statistics, merit points, and your position on the leaderboard. This screen is accessible by tapping the "Profile" tab in the bottom navigation bar. The profile section is designed to give you a clear picture of your engagement with campus events and encourage active participation through visible recognition and merit tracking.

### 5.1 User Information

At the top of the Profile screen, you will see your display name and your affiliated faculty or department. This information is pulled from your account registration details. If your name appears as "Unknown User," it means your profile information has not been fully set up yet. Your faculty affiliation helps categorize your participation statistics and can be used for inter-faculty competitions or reporting purposes.

### 5.2 Statistics Overview

The Profile screen features three statistics cards that track your event involvement. These cards provide a quick snapshot of your campus engagement and are updated in real time as you participate in events. The statistics displayed are:

| Statistic           | Description                                                                                                         |
|---------------------|---------------------------------------------------------------------------------------------------------------------|
| Merits Collected    | Total merit points earned from attending and volunteering at events. Merits contribute to your leaderboard ranking. |
| Events Participated | The total number of events you have attended and scanned your QR code for.                                          |
| Events Volunteered  | The number of events where you served as a volunteer. Volunteering typically awards additional merit points.        |

Table 2: Profile Statistics Explained

## 5.3 Leaderboard

The leaderboard is a competitive feature that ranks all RazakEvent users based on their total merit points. Your current leaderboard rank is displayed prominently on the Profile screen. To view the full leaderboard, tap the "View Leaderboard" button. The leaderboard shows the top participants across the university, fostering a sense of healthy competition and encouraging students to attend more events and participate more actively in campus life. Users with higher merit points appear higher on the leaderboard, and rankings are updated in real time as new attendance records are processed.

## 6. Troubleshooting

This section addresses common issues you may encounter while using RazakEvent and provides practical solutions to resolve them. If you experience a problem not listed here, please contact the RazakEvent support team through your faculty representative or the official communication channels provided by the development team.

### 6.1 Common Issues and Solutions

| Issue                        | Solution                                                                                                                                                                       |
|------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Cannot log in                | Verify your UTM email and password are correct. Ensure you have an active internet connection. If you forgot your password, use the password reset feature or contact support. |
| Events not loading           | Check your internet connection. Pull down on the Home screen to refresh the event list. If the problem persists, try closing and reopening the app.                            |
| QR code not scanning         | Ensure adequate lighting. Hold the device 15-30 cm from the QR code. Clean your camera lens. Make sure the entire QR code is visible within the scanning frame.                |
| Profile shows "Unknown User" | Complete your profile setup by updating your display name and faculty information in the app settings after logging in.                                                        |
| App crashes or freezes       | Update the app to the latest version from the GitHub Releases page. Restart your device. Clear the app cache in Android Settings.                                              |
| Duplicate scan warning       | This means your attendance has already been recorded for this event. You do not need to scan the QR code again.                                                                |

Table 3: Common Issues and Solutions

## 7. Navigation Quick Reference

RazakEvent uses a simple bottom navigation bar with three tabs to help you move between the main sections of the app. The table below provides a quick reference for what each navigation tab does and how to access it. Understanding this navigation structure will help you use the app more efficiently and find features faster.

| Tab     | Icon        | Purpose                                                                          |
|---------|-------------|----------------------------------------------------------------------------------|
| Home    | House icon  | Browse events, filter by category, view weekly and upcoming events, and log out. |
| Scan    | Camera icon | Open the QR code scanner to record your attendance at events.                    |
| Profile | User icon   | View your statistics, merit points, leaderboard rank, and account details.       |

Table 4: Navigation Quick Reference
